After working a few years, an electrotechnician can re-enter the College of Engineering and complete his Electrical Engineering course. Meanwhile, he has the backing and indorsement of the school, which places its entire employment resources at his command.

ELECTROTECHNICIAN I

Mr. Duft and several others of the term I Technician class will be applicants for a feeding permit. The suggestion was made by Mr. Ericson when Mr. Duft was contenting himself by eating a tomato in class. Mr. Ericson advised Mr. Duft to eat it slowly so as not to cause indigestion.

During a period in mathematics, Mr. Groth of the term I Technicians had tried to acquaint the class with a long square, but abandoned the idea when Mr. Ericson asked him to define one. Mr. Groth is still in doubt as to how he absorbed the idea.

One day as Mr. Czenkiewicz came into the Fraternity House dining hall and, seeing that beans were served, said to his friend Nienow, "Well, where is the pork?" Mr. Nienow, pointing to a bean, said: "Here Sir, it is behind this bean!"

One morning as Mr. Ralph Martin was taking a wash, Mr. Hoover came into the room and said: "Oh! I see, you also are participating in aquatic sports."

ELECTROTECHNICIAN V-B.

Bevo! Who said they never could come back! Our class club has started anew with almost all new officers. They seem to be all trustworthy and hard working men; by the way the class elected them. The new officers are: William Westerman, a fellow who can at least handle our great class as president; L. Crapo, one known to the class as a good fellow, as vice-president; the honest Mr. William Limberg, secretary-treasurer, and Mr. C. Laatch, sargeant-at-arms, because we need it. Ou! I almost forgot myself, the Honorable Mr. C. Taufner, as class reporter.

Let me relate to you a little incident which happened in class. It was the history period and Mr. Crenshaw named laws in class as executive, legislative and judicial department in an outing camp of boys. Mr. Crenshaw made an announcement that Fred "Fat" Ropeter did not always wake up at the stated time in the morning.

The Legislative body introduced a law that he must wash the dishes for two weeks if he did not awake at the stated time. Then "Fat," rather peeved, got up and said, "Oh! I'll eat that much more for dinner then."

ELECTRICIANS III-A

Vacation time is here and many of our class have departed for home, but some are obliged to stay because of the inconvenience of traveling long distances and the resulting shortened vacation. Nevertheless, it will be a great relief to relax after nearly nine months of intensive study.

We are working at present on a very interesting part of the course, that is, on motors and generators with Mr. Hennig our instructor.

The year, so far, has been a very delightful and successful one for us, and we hope it may continue that way.

EMPLOYMENT DEPARTMENT

We are under arrangement with sixty-nine Milwaukee concerns to

A GREAT SEASON
IS OPENING WITH
SCHOOL OF ENGINEERING
America's Leading Electrical School

Names pouring in for the September and October terms. Practical electricity and electrotechnician terms Sept. 1st.

Electrical and Mechanical Drafting, Sept. 15th. Electrical Engineering Oct. 1st. B. S. Degree. Attendance from 46 states and seventeen foreign countries. Wisconsin has over 550. Cost nominal. Athletics. Winning ball nine; won six out of seven games. Track team took first and second prizes at Marathon. Gymnasium, football, basket ball. Lakeside advantages. Nine instructors added to staff, 43 now.

Reserve officers Training Corps. Free uniforms and camp Good pay after two years' service (optional.)

"Earn while you learn" plan. 69 Milwaukee concerns employ from one to fifteen of our students and want more. Many make life-long connections. Individual attention given each student.

1 Year Course in
School of Practical Electricity
One of the most complete courses ever offered. Originated 16 years ago. Constantly improving. Now recognized as the standard. Helped thousands to promotion and success. Of great value to those with limited time and means. No special educational qualifications necessary. Term opens September 1st.

18 Months' to 3 Years' Course in
Institute of Electrotechnics
If interested in electrical education, but not having sufficient secondary school credits one may enter with grammar school diploma. Secondary school studies and daily practice in electrical laboratories make this course one of the leaders in the preparatory school field. While getting his secondary school education, a student becomes thoroughly familiar with electricity and develops his earning capacity. Term opens September 1st.

3 Year Thorough and Practical Course in
College of Electrical Engineering
which leads to B. S. degree. Open to Electrotechnicians and Secondary School graduates. Term opens October 1st.

1 Year Thorough Course in
School of Electrical and Mechanical Drafting
Applied Mathematics, Chemistry, Technical English, Mechanics' Drafting taught. Prepares for Industrial Drafting Room positions. Term opens Sept. 15th.

Extension Department
for those who cannot attend the resident school at present. Payments credited on their tuition when they enter the school. So it's FREE.

Call or send for PHOTO-STORY.

"Through the school in thirty minutes."

3 large drafting rooms, 8 fully equipped laboratories. 62,000 feet floor space in three buildings.
